Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is indefinite for failing to positively define a structure of the implant. There is no body with dimensions to define a longitudinal direction. It is not clear what element reinforce the implant. Furthermore it is not clear if the reinforced element exhibits the helical configuration or if the degradable material is helical.

Claims 2 and 3, there is no support for "the internal reinforcement".

Claim 4, it is not clear how the term "screw-thread" further defines "helical".

Claim 5, see rejection to claim 1 supra.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3738

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Tormala et al.

Tormala, et al discloses a surgical implant comprising a biodegradable material internally reinforced in a longitudinal direction having a helical configuration. The reinforcing elements include fibrils and fibers.

Claims 1-5 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by D'Alessio et al.

D'Alessio et al discloses a surgical implant comprising a biodegradable material September 9, 2001internally reinforced in a longitudinal direction having a helical configuration. The reinforcing elements include fibrils and fibers. The helical configuration would inherently have a screw threaded configuration. The reinforcing elements may having more than one orientation.
